秦宇鸿

yuhongqin1008@hotmail.com, +8618872795668

教育背景

伦敦大学学院（经济研究生） 2021.09-2022.12

西南财经大学（金融本科） 2017.09-2021.06

荣誉奖项： 校级一等奖学金, 优秀学生干部，国家级创业项目特等奖

核心能力

- 核心能力: **AI agent，大模型应用，端侧 AI，多模态交互，AI 功能商业化，跨国视野**
- 3 年 AI 产品经理经验，独立主导宝马中国智舱 AI 与大模型产品，包括车载 AI agent，端侧 LLM，具备 AI 产品规模化落地经验。在慕尼黑总部外派 4 个月，参与跨国 AI 工程协作，具备国际化视角

工作经历

宝马中国 智舱 AI 产品经理 慕尼黑外派/北京 2023.04-至今

核心职责

座舱场景化 AI 智能体设计

- **场景与需求设计：从 0 到 1 落地主动式 AI agent**，支持用户通过自然语言完成多目标行程规划（限时出行、景点游览、餐厅选择），将传统“路线计算”升级为任务级规划与决策支持
- 拆解高频出行全链路：出发规划、途中服务、目的地抵达、返程闭环，梳理 30+核心场景（如导航+加油/充电/停车联动、行程提醒、车内娱乐定制）。定义“意图+槽位+上下文”交互框架，支持多轮对话、跨场景记忆，降低用户操作成本
- **主导车载 AI 语音助手交互升级**，针对传统式语音对口语化支持差、多轮能力弱、覆盖率低等问题，重构语音交互与系统决策框架，将语音从“固定指令工具”升级为具备容错与多轮能力的智能助手。于 25 年 7 月在新一代车机系统上线，能实现自然的多任务处理（车控，娱乐，多指令），扩充了座舱语音技术能力包括车舱语义继承，多意图理解
- **设计多轮对话状态机与语义继承机制**，负责多轮对话需求梳理、场景定义、语料设计、模型优化目标制定，联动算法/数据团队完成上下文关联、多意图解析、跨场景续聊三大能力落地；主导灰度测试与效果验收，建立多轮对话体验评估体系。多轮对话理解准确率从 79%提升至 95%，用户连续交互完成率提升 32%，语音助手日均活跃用户提升 15%

智能座舱 AI 产品评测与根因拆解体系搭建

- **标准化评测与闭环管理机制搭建**：建立周度固定评测复盘流程，基于全量用户对话数据，完成 Bad Case 分类、统计、优先级排序，针对每一类核心 Bad Case，完成千级样本的全量日志回溯，精准定位问题根因，为模型调优与体验优化提供精准方向
- **主导全链路模型调优与落地优化**：针对多意图车控、专业知识问答、驾驶安全、多轮对话等核心场景，补充车载真实场景少样本示例，贴合用户口语化表达习惯；针对端侧小模型完成 Prompt 轻量化优化，精简至 300 字以内，适配座舱域控制器算力限制
- 牵头联合宝马售后技术团队，完成 3 款车型 RAG 专属知识库的结构化升级，针对 TOP100 高频用户提问，补充口语化同义词、近义词标签，大幅提升检索召回率

AI 功能成本管理

- **AI 成本模型与预算规划**，覆盖：供应商合作方式（LLM 推理成本 by Token / 调用频次/单车服务），AIGC 使用量分级（图片 / 天 / 用户），AI 语音、模型授权许可费用评估，构建多场景 AI 成本测算模型（如：单车 / 月），支持产品规模化决策
- **基于用户行为数据驱动 AI 能力上车优先级决策，**通过车机用户行为、功能使用频次，识别高价值 AI 能力（如车控、出行/旅行陪伴、智能推荐等）的真实用户需求与使用强度，建立了 AI 功能优先级评估框架
- **AI 合作模式选择及 MLC 成本优化策略**，确保 AI 产品在长期大规模部署下具备商业可持续性，组织跨部门协作，与产品团队、研发团队、市场与财务共同负责 AI 功能的评估与优先级排序，确保多项 AI 功能在预算可控范围内落地

AI 前沿洞察及竞品分析（慕尼黑外派）

- 外派期间，深入洞察**全球市场 AI 座舱技术与竞争格局**，系统性开展欧洲及北美市场 AI 能力 benchmark，覆盖语音助手、多模态交互、生成式 AI 在座舱中的落地路径，对比 OEM 自研方案与 Google/Apple 等平台生态，识别平台与 OEM 的可差异化空间
- **用户行为差异分析**，深度分析欧美用户在车内 AI 使用习惯的关键差异，以及数据隐私及 AI 可解释性的高要求，推动座舱 AI 从‘多轮对话’向‘低轮次、高确定性任务执行’设计转型
- 基于欧美用户对低分心、高确定性与隐私可控 AI 体验的偏好，提出以车辆专家型 AI、Road Trip/旅游陪伴及 HUD/仪表多模态呈现为核心的海外座舱 AI 产品机会框架，支撑**宝马全球车型的 AI 能力规划**与风险控制

其他

- **技能:** Microsoft Office (Excel, PPT), thinkcell, tableau，商务英语

EDUCATION

University College London (UCL) – MSc in Economics 2021.09 – 2022.12
Southwestern University of Finance and Economics – BSc in Finance 2017.09 – 2021.06
Honors & Awards: First-Class Scholarship, Outstanding Student Leader, National Entrepreneurship Competition – Grand Prize

CORE COMPETENCIES

- **Core strengths：AI Agents & LLM Applications**, On-device AI, Multimodal Interaction, AI Feature Commercialization & Cost Management, Cross-functional & Cross-cultural Collaboration, Global Market Perspective
- **3+ years of experience as an AI Product Manager**, leading intelligent cockpit AI and large-model products at BMW China, Completed a **4-month assignment at BMW Headquarters in Munich**.

PROFESSIONAL EXPERIENCE

Intelligent Cockpit AI Product Manager Munich expat/Beijing | Apr 2023 – Present

Project: AI Travel Companion

- Designed and launched a **proactive AI Travel Companion** by building a **rule-driven trigger engine** based on multi-source vehicle and trip signals. Proactive recommendations are triggered only when both **hard conditions** (e.g. approaching destination, low-speed wandering) and **confidence-enhancing signals** (detours, map interactions, time pressure) are satisfied.
- Designed an **LLM + API architecture** that clearly separates **intent understanding and decision-making** from **system execution**, introducing structured intent parsing and parameter mapping. By fusing natural language input, real-time vehicle signals, and user preference data, the system reliably converts ambiguous user requests into **structured API calls**.
- Defined a **unified Tool Schema and parameter parsing framework**, ensuring stable execution while further reducing unnecessary clarification during driving.
- Implemented **deterministic candidate filtering and scoring** via API execution (distance, availability, pricing, historical usage), and introduced **confirmation and rollback mechanisms**.
- Established a **product-level explainability and post-analysis framework**, invalid triggers were significantly reduced after launch, and user acceptance and task completion rates for proactive services improved by approximately 30%

Project: Proactive AI Voice Assistant

- Led the transformation of a traditional voice assistant into a **task-driven AI Agent**, upgrading the system from **single-turn command execution** to **multi-step task completion**.
- Designed **LLM-based intent understanding and slot filling mechanisms** to convert natural language requests into structured, executable parameters, significantly reducing fallback rates and repetitive user commands.
- Designed **context understanding and session memory mechanisms** to maintain task state and parameters throughout the task lifecycle.
- Implemented **explainable AI outputs** that clearly communicate recommendation and decision rationales (e.g. distance, walking time, availability), and built comprehensive **fallback and degradation mechanisms** (no results, execution failures, user cancellations, task interruptions).

AI Commercialization & Cost Management

- Owned **AI cost modeling and budget planning**, covering LLM inference costs (token usage, call frequency), AIGC usage tiers (e.g., images per user per day), voice AI and model licensing fees
- Used in-vehicle user behavior data and feature usage frequency to drive **AI feature prioritization for vehicle deployment**, identifying high-value AI capabilities such as vehicle control, travel companionship, and intelligent recommendations
- Drove optimization strategies for **AI token and MLC costs**, ensuring commercial sustainability at scale. Led cross-department collaboration with Product, Engineering, Marketing, and Finance to evaluate AI features and prioritize deployment within strict budget constraints

AI Market Insights & Competitive Benchmarking (Munich HQ Assignment)

- Conducted systematic **AI cockpit benchmarking across European and North American markets**, covering voice assistants, multimodal interaction, and generative AI deployment in vehicles
- Compared OEM in-house AI solutions with platform ecosystems such as Google and Apple, identifying **differentiation opportunities and strategic trade-offs** for OEM-controlled AI
- **Key Results**: Proposed an overseas cockpit AI opportunity framework centered on **vehicle-expert AI, road-trip & travel companion scenarios, and multimodal HUD/instrument-cluster interaction**

ADDITIONAL INFORMATION

Skills: Excel, PowerPoint, ThinkCell, Tableau, Business English
